

ANNUAL REPORT · FISCAL YEAR 2025

A year of sun and of wind

Cooperativa Solvent · Local renewable energy in the Garrotxa

2,384 MWh
of clean energy produced

8,412
customers supplied

€312k
net result for the year

Approved by the General Assembly of members on March 21, 2026.

1 Letter from the President

When we founded Solvent, eleven years ago, we had three rooftops, a borrowed windmill and more enthusiasm than money. Today we produce energy for more than eight thousand homes, shops and businesses in the county, and we do it without leaving it: what we generate here is consumed here.

2025 has been the year of **consolidation**. We commissioned the Les Preses solar park, expanded the one at Sant Joan and repowered the three oldest wind turbines. We produced 11% more than the previous year and closed the year with a positive result for the fifth year in a row.

None of this is the work of one person. It is the result of the work of the twenty-three people on our staff, of the more than twelve hundred members who make the decisions in the assembly, and of a network of local suppliers who have installed every kilowatt with their hands and with good judgment.

This report tells what we have achieved, and also what it has cost us and what we still have to do. We invite you to read it with a critical eye: a cooperative improves by asking questions.

With warm regards and eager to keep going,

Carme Vidal i Roca
President of the Governing Council

1.1 Milestones of the year

MARCH

The assembly approves the 2024 accounts with 94% of the votes.

JUNE

The 1.6 MWp Les Preses solar park is connected to the grid.

SEPTEMBER

Repowering works on the three wind turbines are completed.

NOVEMBER

We reach customer number 8,000, a bakery in Sant Feliu.

2 The year in figures

2,384 MWh
of renewable production, 11% more than in 2024

8,412
customers supplied, among homes, shops, industry and public bodies

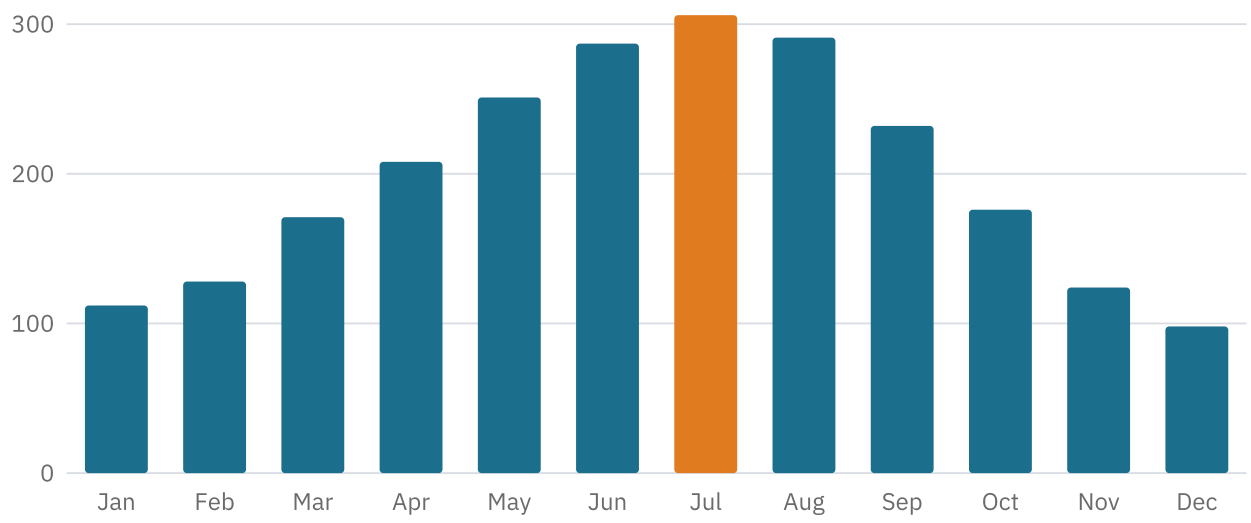

15,900 t
of CO_2 avoided since 2019, the year of the first installation

1,204
members, eighty-seven more than the previous year

23
people on the staff, 48% of them women

€1.35M
invested in new generation and storage

2.1 Monthly production

Monthly renewable energy production in 2025, in MWh. The peak, in July, with 306 MWh.

Production follows the curve of the sun: from November to January it drops below 125 MWh, and between May and August it exceeds 250. Wind partly makes up for the winter, which is why adding a fourth wind turbine, planned for 2026, is one of our priorities.

3 Customers and community

A cooperative exists for those who use it. This year we served 8,412 customers, 46% of them households.

3.1 Households

We added 412 households, most of them in Garrotxa villages that had no local supply offer. The **stable price** tariff held all year, including the winter months.

3.2 Shops and businesses

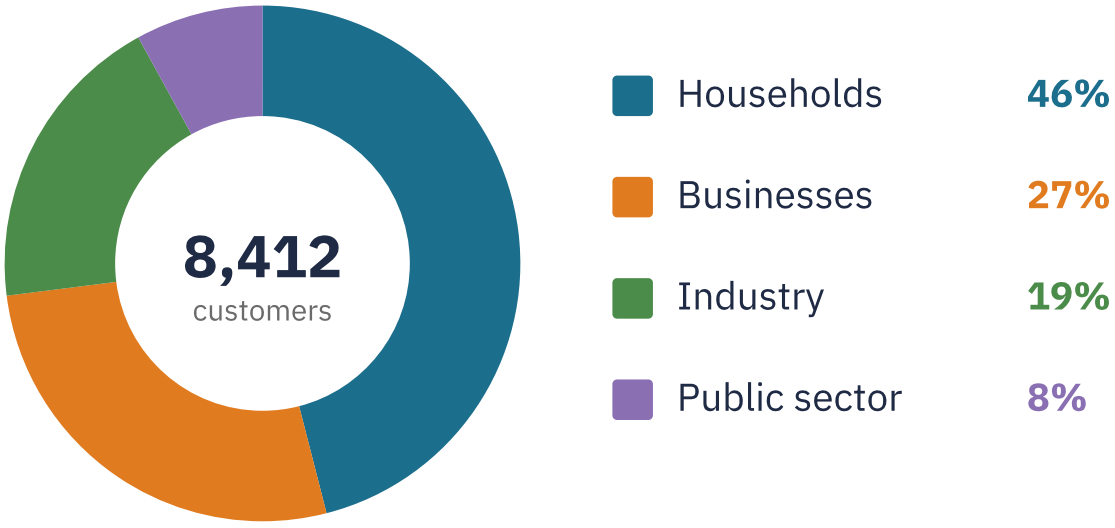

A third of our non-residential customers are bakeries, workshops and small industries that cover part of their consumption with the solar installation we fitted on their roof.

3.3 Energy communities

We supported the creation of **five local energy communities**, in which neighbors share the production of a single roof. Each one received free training and legal advice.

3.4 Solidarity fund

One percent of our turnover goes to a fund that pays the bills of families in vulnerable situations: this year, 61 households.

Breakdown of the 8,412 customers by customer type.

4 Financial results

The accounts for the year, in thousands of euros. Revenue grows by 11.5% and the result by 33.9%, after absorbing the higher depreciation of the new installations.

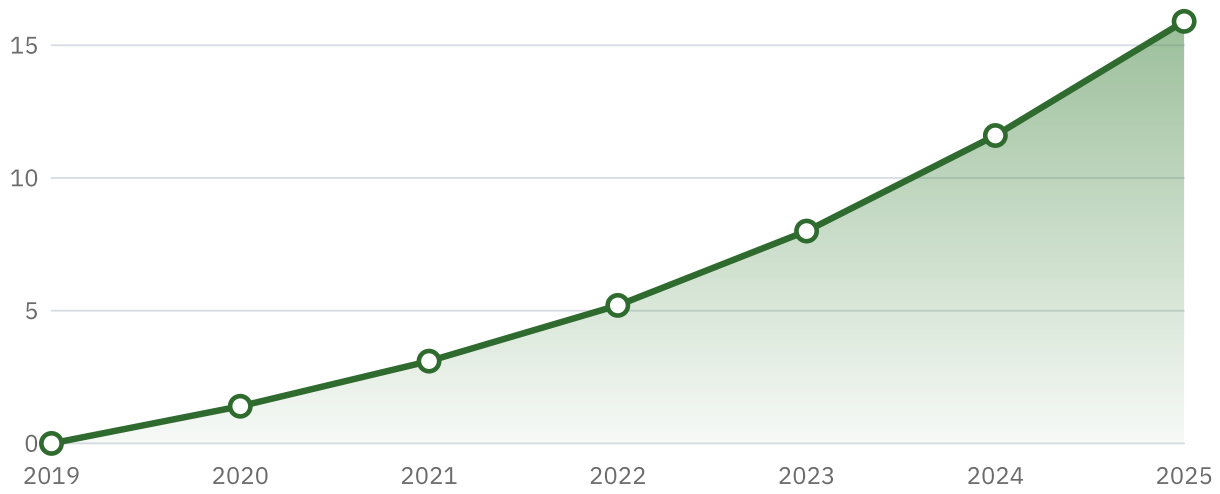

Item	2025	2024	Change
Energy sales	4,128	3,774	+9.4%
Services and maintenance	792	640	+23.8%
Operating expenses	−3,980	−3,612	+10.2%
Depreciation	−540	−498	+8.4%
Financial result	−88	−71	+23.9%
Net result for the year	**312**	**233**	**+33.9%**

4.1 Where the investment went

Project	Investment (€k)	Capacity
Les Preses solar park	780	1.6 MWp
Sant Joan expansion	310	0.6 MWp
Wind turbine repowering	190	0.9 MW
Community warehouse batteries	70	0.2 MWh

100% of the investment was financed with contributions from members, with no debt to financial institutions.

5 Environment

Cumulative tonnes of CO_2 avoided since 2019, in thousands.

> *Every kilowatt-hour we produce here is one that does not have to be brought from far away, or burned.*

5.1 Commitments for 2026

1. Exceed 2,700 MWh of production with the fourth wind turbine and the Les Preses expansion.
2. Cut the emissions of the maintenance vehicle fleet to zero; today it has two diesel vans.
3. Publish the carbon footprint of the whole supplier chain, with the help of the university.
4. Plant four thousand native trees on land provided by the town councils of the county.

5.2 Environmental indicators

Indicator	2023	2024	2025
Renewable production (MWh)	1,930	2,148	2,384
CO_2 avoided in the year (t)	2,800	3,600	4,300
Waste recovered (%)	82	87	91
Water used at the plants (m^3)	640	590	540

6 Governance and next steps

The Governing Council is elected every four years by the assembly. It has seven members: four are worker members and three are consumer members.

Name	Position	In office since
Carme Vidal i Roca	President	2019
Oriol Pagès Vila	Vice President	2019
Núria Serra Comas	Secretary	2023
Jordi Casas Font	Treasurer	2023
Anna Bosch Puig	Consumer member representative	2023

6.1 What comes next

The **General Assembly** of March 21 approved these lines of work for the next fiscal year:

a. Open a customer service office in Olot, with afternoon hours.

b. Launch the time-of-use tariff for customers with an electric car.

c. Double the storage capacity of the community warehouse.

Members can propose items for the agenda one month in advance.

6.2 2026 schedule

Activity	Q1	Q2	Q3	Q4
Customer office in Olot	Works and opening			
Time-of-use tariff		Design and testing		
Warehouse storage			Expansion	
Fourth wind turbine	Permits, construction and commissioning
